Daria Tsoupikova

From generations to generations, with the development and innovation of science and technology, people have been thriving to make this world a better place to live. This poster visualizes the waves of knowledge, investigation and discoveries that have been developed and passed along through generation that eventually built up to the world that we live in today. At the same time this poster represents the generations that have attended Siggraph; all the meaningful conversations and experiences that flourished through this conference. Science and technology profoundly impact the way people live, connect, interact and communicate. What we imagine now becomes the future for our next generation.

I used Adobe Photoshop and Illustrator to create this poster. Through Illustrator, I drew the lines of head silhouettes with a pen tool and scaled down to visualize generations of people. I also used a copyright-free image of line waves. I also transformed the 0 and 1s with a mesh tool to visualize the generations of time. Then, I exported them to Photoshop and created the poster. I downloaded the logo from the Siggraph web page.
