

Sliding Menu

Hamburger icons

The screenshot displays the Iconfinder website interface. At the top, the search bar contains the text "hamburger menu" and a green search button with a magnifying glass icon. Below the search bar, there are navigation tabs for "All styles" (highlighted in green), "Glyph", "Outline", "Flat", "Photorealistic", "3D", "Handdrawn", "Cartoon", "Pixel", and "Sm".

On the left side, there are filter options:

- Filter menu** (dropdown arrow)
- ICON FORMAT**: "Any" (selected) and "Vector"
- PRICE**: "Any", "Free" (selected), and "Premium"
- LICENSE TYPE**: "No license filtering" (dropdown arrow)
- ICON SIZE**: A slider ranging from "0 px" to "128 px"
- BACKGROUND**: Four circular options (white, black, light gray, and a patterned gray)
- FILTERS** (text at the bottom)

The main content area is titled "Hamburger menu icons found" and includes "Related searches: food, list, fast, burger" and "Active filters: FREE *". Below this, there is a grid of icon preview cards. Each card shows a different style of a hamburger menu icon (three horizontal lines) and includes format options like "SVG", "PNG", "AI", "CSH", and "More" (dropdown arrow).

Hamburger Menu

cons

Discoverability

Extra tap to open, close

Position -furthest away spot for right-handed

pros

Clean

Simple

Uncluttered

Playful

Effective on mobile device

Sliding Menu

Move to the right side to increase user engagement
replace with a different navigational option

(clean, fresh look without the need for hiding information in a side drawer)

Optimize menu content : top and bottom options in focus
arrange the elements from most important to least important

(users scan content vertically)

narrow down navigation to a few options

consider a text-only menu

Sliding Menu

Sliding drawer navigation menus

- The majority of modern browsers support pure CSS sliding menus
- And all of them support JavaScript
- Older browsers (Explorer 6 or Firefox 2)do support JavaScript, but they may not support CSS rendering for menus and /or sliding animations
- The goal is to support the widest variety of browsers without compromising the design

Sliding Menu

Use a recognizable icon to remain consistent for a good UX
Bring focus to the menu

Examples:

[Comedy Central](#)

[The Minute of Silence](#)

Pure Drawer

Pure Drawer

<http://mac81.github.io/pure-drawer/>

- made with pure CSS
- Many custom options (pulling the menu left, right, top, anim. style, icon design, etc.)
- Nav menu below the page (page dynamic)

Pure Drawer

Home

Documentation

Demo Multiple Drawers

PURE DRAWER

Pure CSS transition effects for off-canvas views

You have probably all seen the "drawer menu/off-canvas" navigation style made popular by Facebook a few years back. There are a lot of great javascript plugins that offers this functionality, but I thought it would be cool to try and do this with the new cool features of css. No javascript required.

Sidr

Sidr

<https://www.berriart.com/sidr/>

- Enables full menu on larger screens
- controlled programmatically
- Touch-enabled
- is easy to use
- easy to customize
- Nav menu on top of the page (page static)

Projects

Supported Projects

Numcol

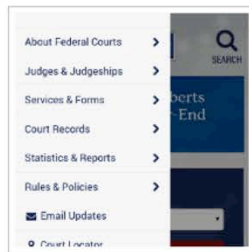

The Brain Training Game About Matching Numbers And Colours. It's the first and the unique game for phones I've ever developed. I've done it with Cordova and vanilla Javascript. I know that is not the best game you ever seen, but is fine for an elevator trip.

puppet-nvm

Node Version Manager (NVM) is a little bash script that allows you to manage multiple versions of Node.js on the same box. This Puppet module simplifies the task of installing it and allows to install unique or multiple versions of Node.js.

Sidr

Sidr is a jQuery plugin for creating off-canvas side menus and an the easiest way for doing your menu responsive. It's the most popular code I've ever wrote and it's used in more than 150.000 websites including fox.com, uscourts.gov,...

BeatRealtime

This a little experiment I did to try the Google Analytics Real Time API. You can login with your Google Analytics account and see the your current visitors in real time. You can see also their location in a world map built with D3.js.

Slidebars

Slidebars is a jQuery plugin for quickly and easily implementing app style off-canvas menus and sidebars into your website.

Slidebars was born from a reoccurring need to create off-canvas sliding mobile menus for responsive design. It's ultra-light at 1555 bytes (js) & 660 bytes (css) when gzipped, uses hardware accelerated transitions where possible for quick and smooth animation, falling back to jQuery .animate() on un-supporting browsers.

Slidebars aren't just for handheld devices, they can be used for implementing revealing content on sites and screens of all sizes.

Lab

1 . Use w3schools example to implement hamburger menu:

https://www.w3schools.com/howto/howto_js_sidenav.asp

2. Slideout.js

<https://mango.github.io/slideout/>

- Use slideout.js library to add sliding menu to bgcolor.html doc
- Follow guidelines
- Add slideout.js link
- Create “menu” and “panel” boxes
- Add slideout function

Lab

Menu (#menu)

```
<nav id="menu">  
  <header>  
    <h2>Menu</h2>  
  </header>  
</nav>
```

Main content (#panel) in the <body>

```
<main id="panel">  
  <header>  
    <h2>Panel</h2>  
  </header>  
</main>
```

Lab

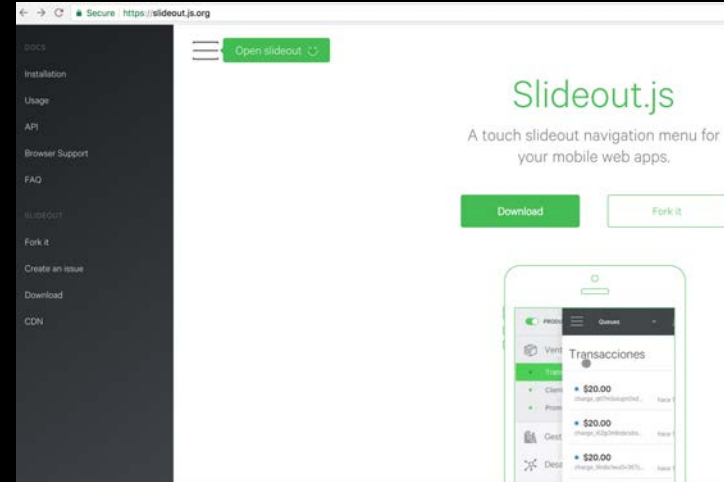

```
<script>
```

```
var slideout = new Slideout({  
  'panel': document.getElementById('panel'),  
  'menu': document.getElementById('menu'),  
  'padding': 256,  
  'tolerance': 70  
});
```

```
// Toggle button
```

```
document.querySelector('.toggle-button').addEventListener('click',  
function() {  
  slideout.toggle();  
});
```

```
</script>
```

Lab

Drawer

<http://git.blivesta.com/drawer/>

Link or download libraries (jQuery, iScroll, Drawer).

Lab

```
<!-- drawer.css -->
<link rel="stylesheet"
href="https://cdnjs.cloudflare.com/ajax/libs/drawer/3.1.0/css/drawer.min.css"
>
<!-- jquery & iScroll -->
<script
src="https://ajax.googleapis.com/ajax/libs/jquery/1.11.3/jquery.min.js"></scrip
t>
<script
src="https://cdnjs.cloudflare.com/ajax/libs/iScroll/5.1.3/iscroll.min.js"></script>
<!-- drawer.js -->
<script
src="https://cdnjs.cloudflare.com/ajax/libs/drawer/3.1.0/js/drawer.min.js"></sc
ript>
```

Lab

```
<body class="drawer drawer--left">
  <header role="banner">
    <button type="button" class="drawer-toggle drawer-hamburger">
      <span class="sr-only">toggle navigation</span>
      <span class="drawer-hamburger-icon"></span>
    </button>
    <nav class="drawer-nav" role="navigation">
      <ul class="drawer-menu">
        <li><a class="drawer-brand" href="#">Brand</a></li>
        <li><a class="drawer-menu-item" href="#">Nav1</a></li>
        <li><a class="drawer-menu-item" href="#">Nav2</a></li>
      </ul>
    </nav>
  </header>
  <main role="main">
    <!-- Page content -->
  </main>
</body>
```

Lab

Drawer call:

```
<script>  
$(document).ready(function() {  
  $('.drawer').drawer();  
});  
</script>
```

Lab

```
$(document).ready(function() {  
  $('.drawer').drawer();  
});  
  
var slideout = new Slideout({  
  'panel': document.getElementById('panel'),  
  'menu': document.getElementById('menu'),  
  'padding': 256,  
  'tolerance': 70  
});  
  
document.querySelector('.toggle-button').addEventListener('click', function() {  
  slideout.toggle();  
});
```

Lab :focus

Focus Blur

CSS :focus Selector

The :focus selector is used to select the element that has focus.

```
input:focus {  
    background-color: yellow;  
}
```

[example_focus_blur](#) > [focus-blur_example.html](#) > [c06.css](#)

Lab :focus

```
<!DOCTYPE html>
<html>
  <head>
    <title>JavaScript / jQuery Events - Focus and Blur</title>
    <link rel="stylesheet" href="css/c06.css" />
  </head>
  <body>
    <div id="page">
      <h1></h1>
      <h2>Focus Blur</h2>
      <label for="username">Textfield 1 </label>
      <input type="text" id="username" /><div id="feedback"></div>
      <label for="password">Textfield 2 </label>
      <input type="password" id="password" />
    </div>
  </body>
</html>
```

Lab :focus

```
input[type='text'], input[type='password'], textarea {  
  background-color: #999;  
  color: #666;  
  font-family: 'Oswald', 'Futura', sans-serif;  
  font-size: 24px;  
  width: 96%;  
  padding: 4px 6px;  
  border: 1px solid #999;  
  border-radius: 8px;}
```

```
input[type='text']:focus, input[type='password']:focus, textarea:focus {  
  border: 1px solid #fff;  
  background-color: #fff;  
  outline: none;}
```
