

HTML and CSS

Combine the basic HTML5 structure with CSS stylesheets. Design your pages, so that they nicely displayed in colors and styles. You have to decide which content is important to emphasize and which content you can omit from highlighting. Use external and internal styles.

Intro Page (index.html)

Information Page (info.html)

Forms Page (forms.html)

CSS external styles page (css.html)

Pages should contain both block and inline elements, as well as `` and id tags.

At least two examples for each color style we covered.

At least one iFrame.

Several meta tags.

Several `` `<style>` , id and class elements.

Properly formed HTML+CSS tags.
