Creative Coding is a new interdisciplinary course that investigates how contemporary technologies can inspire novel forms of creative practice. It will introduce software programming and creative coding techniques within the context of the digital media design. Media artists and designers have been utilizing computers for innovative creative expression since the late 1960s; the recent proliferation of low-cost consumer grade devices with advanced sensing, display, and computing capabilities, such as smart phones, Virtual Reality, drones, 3D printers, and microcontroller kits, marks possibly a new era of creative exploration. The field of “creative coding” emphasizes the goal of expression, rather than function, and creative coders combine computational skill with creative work in a variety of media. This is a project-based course designed to provide an introduction to current creative coding programming paradigms, and investigate the challenges and opportunities that emerge when using new technologies for expressive purposes.

The class projects will focus on creative programming for a high resolution, largest in the world, virtual reality environment CAVE2 in the Electronic Visualization Laboratory (EVL). To contextualize these projects, we will read widely from both seminal texts in multimedia and recent proceedings from computer science and media arts conferences, such as ACM SIGGRAPH and the International Symposium on Electronic Art (ISEA).

This course assumes that students have no prior programming experience but an enthusiasm to study code and scripting to use computation to extend inquiry and exploration in media and society.

This course will introduce a variety of concepts in programming, from the basics of coding and scripting to more complex programming techniques and investigate their applications to create critical, experimental, analytical, and visualizing design. Participants will develop new skills and produce interactive projects using 3D, visualization, virtual reality, multimedia and audiovisual media. Specifically, we will use the Unity3D game development environment, Javascript, and Max. Students will learn current techniques for creating interactive multimedia software, and by the end of the course students will have obtained a better understanding of the challenges and opportunities that emerge when using new technologies for expressive purposes.

This term we will have an opportunity to collaborate with CS 523 Computer Science students on the development of the interdisciplinary project for the 150 N Riverside media wall. This is an exciting new public arts venue with a unique, 3,000+ square foot LED screen; the largest in Chicago. The students will work in teams to realize complex challenging and inspiring concepts. Graduate students will be asked to develop and document more extensive projects, and to create public art installations.

Laptop computer
External hard drive - to save your back up files. Students are required to store and backup their files appropriately and an additional data storage is strongly advised for back-up.

There is a $125.00 required laboratory fee for this course, which is used for the course supporting materials, and supplies (copies, media storage, supplies for presentation etc.)
Your final grade will be based on your performance on the group project, evaluations of team member performance (peer evaluation), attendance and participation.

On-time class attendance is mandatory. It is not possible to make up or compensate for missed class sessions. More than two unexcused absences will result in a reduction of the final grade by one letter grade; with every additional unexcused absence, the final grade will drop by an additional grade. Some of the discussions and exercises are done and graded in-class so you must attend class to receive these points.

For best in-class participation, you should complete required readings and tasks before class (will be specified in the study guide in each module). Be prepared for a lot of hard work: be prepared to code, often, and much outside of the class. This course will be difficult but also very much in-depth and useful to prepare your creative portfolio.

There is a lot of self-study required as our lecture time limited as well as our lab time, and the goal is to maximize that time. Each session will have required pre-reading and post-reading. The instructor reserves the right to add online tutorials, lectures and video sessions to class lectures and homework.

You must submit all assignments via UIC Box/Dropbox unless otherwise instructed on the deadline specified for each assignment. Assignments must be professionally prepared with recommended computer applications. Unless otherwise stated, assignments must be submitted electronically to the UIC Box.

Projects more than 5 days late will not be accepted. Be sure to submit the work well ahead of due time. Excuses like website or computer error will not be accepted after the due date.

‘Incompletes’ will only be granted according to University policy.

A Consistent growth in the above listed as well as excellent work. Excellent work consistently goes above and beyond what is required.
B Above average growth in the above listed as well as above average work.
C Average growth in the above listed as well as average work.
D Dissatisfactory growth in the above listed and incomplete work.
E Dissatisfactory growth in the above listed, incomplete work and poor attendance.

The numeric breakdown for the final grade follows:
40% Assignments and exercises
40% Final project
20% Attendance and participation

Any individuals with learning disabilities or special needs must make the instructor aware of them prior to the due date of the first major assignment. Those who require accommodations for access and participation in this course must be registered with the Disability Resource Center. Please contact DRC at 312/413-2183 (voice) or 312/413-0123 (TTY). http://www.uic.edu/depts/ooa/disability_resources/contact.html

If you wish to observe your religious holiday, which is in the conflict with mandatory academic attendance, you should notify the instructor by the tenth day of the semester of the date on which you are requesting an absence.

You are responsible for understanding what constitutes academic dishonesty. Academic dishonesty is an extremely serious offense. All cases of academic dishonesty will be dealt with in accordance with the policies of the University as published in the Undergraduate Catalogue and the University of Illinois at Chicago policy on Academic Honesty at: http://www.uic.edu/ucat/cat1315archive/index.shtml
### Recommended Readings

- Proceedings of ACM SIGGRAPH, 2016 and earlier. (Available from ACM through UIC digital library)
- Leonardo, 2016 and earlier (Available from MIT Press through UIC digital library)
- Proceedings of the International Symposium on Electronic Art, 2015 and earlier (Available online)
- Knowledge Machines, Digital Transformations of the Sciences and Humanities by Eric T. Meyer and Ralph Schroeder, MIT Press, 2015
- Unity Game Development Essentials Kindle Edition by Will Goldstone
- Unity 3D Game Development by Example Beginner's Guide by Ryan Henson Creighton
- Learning C# Programming with Unity 3D by Alex Okita
- Beginning Visual C# Express: A Computer Programming Tutorial by Philip Conrad, Lou Tylee

### Policies

- No cell phone usage in the lab. You are responsible to turn your cell phone off prior to the class.
- No non-class materials loaded into the computers.
- No food or drink in the computer labs.
- No surfing the Internet during lectures.
- Reconfiguring the system on Cyber-Commons/CAVE2 unusable for other courses and may result in dismissal from the course.

### Disclaimer

- Projects created in this course may be used by the College for purposes of promotion for students, the Schools or the University in general. The School may also use these materials for instructional purposes in future courses.
