User experience (UX)

encompasses all aspects of the end-user's interaction with the company, its services, and its products. meet the exact needs of the customer (no fuss or bother)

simplicity and elegance (produce products that are a joy to own, a joy to use)

Don Norman & Jakob Nielsen

to achieve high-quality user experience there must be a seamless merging of the services of multiple disciplines, including engineering, marketing, graphical and industrial design, and interface design.

Research Process

Learning from people Design is a process from the beginning

In-situ observations of related Ensure interaction flows for a user practices

Especially important on a small-screen mobile device!

world behavior

Design of a new application/service should be grounded in daily realities

Should work with how people think about each other, their environments, and the world

Need to get out into the world to learn this

Research Process / Prototyping

- 1. ethnographic-style investigations in a new space of interest
- 2.concept generation and prioritization
- 3.initial prototype implementation
- 4. field test of new system
- 5.iterate
- 6.product decision
- 7.development

Research Process

Define research questions (A1, A2)

What do you need to know to create your new app? Focus on understanding current practices

Define methods

Research, observation, interviews, home tours, diary logging...

Recruit users (Students, classmates, family members, friends)

Generally 7-10 is sufficient, stop when you see repeat data

Conduct User Study (CS 524 Empirical Research Methods)

Analyze Data

Design!

Semi-Structured Observation

Goal:

To develop understanding of area of interest – inspire design ideas for new applications

Process:

Focus on understanding current practice

Come up with a few research questions.

Observe people performing activities in your area of interest.

Ask questions about their use that help you understand answers to questions.

Write exact quotes or observations on post-it notes – a single idea to a note

capture notes

 $lage\ Sources:\ uxplanet.org/ux-glossary-task-flows-user-flows-flowcharts-and-some-new-ish-stuff-2321044d837d\ |\ grahamtodman.co.uk/blog/user-flows-flowcharts-and-some-new-ish-stuff-2321044d837d\ |\ grahamtodman.co.uk/blog/user-flowcharts-and-some-new-ish-stuff-232104d8837d\ |\ grahamtodman.co.uk/blog/user-flowcharts-and-some-new-ish-some-new-ish-stuff-232104d8837d\ |\ grahamtodman.co.uk/blog/user-$

- 1. Market Research (A1)
 - Overview of the relevant apps on the market
- 2. Research Studies (A1-2)

To develop an understanding of research partner domain

- 3. UX sketches/ design (A2)
- 4. Wireframes / Rough Prototyping / User studies (A3)
- 5. Team Wireframe presentations & Discussion (A4)
- 6. Client Wireframe Presentations \(\) / Wireframe merge (A4)
- 7. Iconography (A5)
- 8. Hi fidelity design / Storyboard Design (A6)

Working collaboratively— show early, share often, get feedback. YES, even "ugly" sketches!

Professional Practice I

Include just enough detail in your sketches to convey an idea

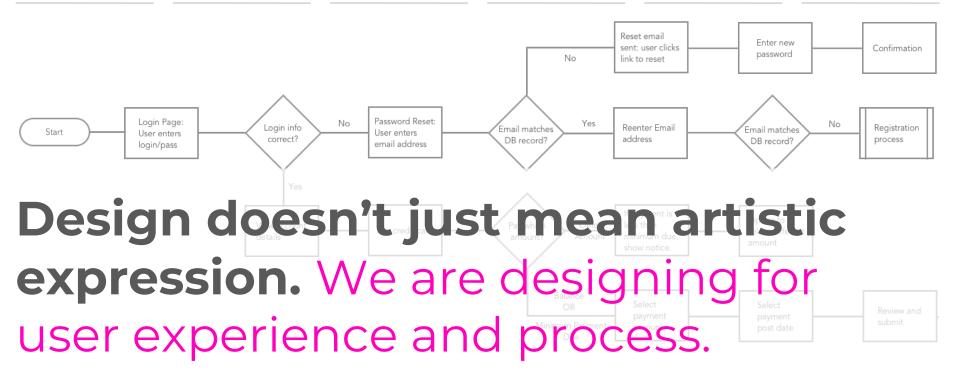

Go analog = Paper

Forces you to think through ideas and rework/expand

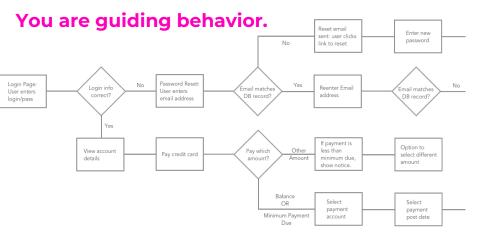

Easier to get feedback

Image Source: grahamtodman.co.uk/blog/

Scenario planning, think through the logic and flow a user will experience while navigating your app.

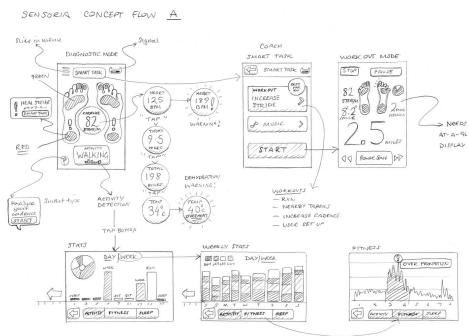

Image Sources: uxplanet.org/ux-glossary-task-flows-user-flows-flowcharts-and-some-new-ish-stuff-2321044d837d | grahamtodman.co.uk/blog/

Consider all functional elements needed to help the user achieve the app goal.

A Wireframe is a blue print, or skeletal framework for the app.

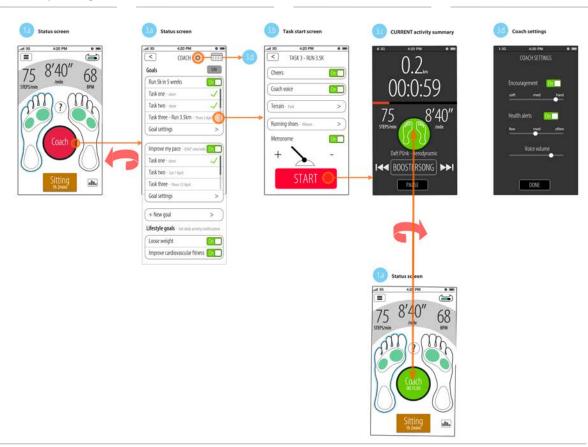

Image Sources: grahamtodman.co.uk/blog/

"Wireframing is the make or break part of any UX project. It's where you want to fail fast, fail early, and fail cheap." Scott Childs, Senior Creative Director, Capital One

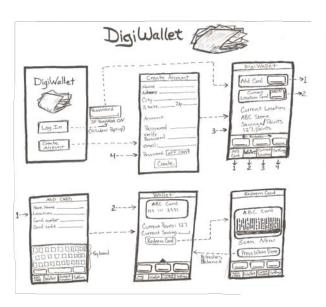

Professional Practice I

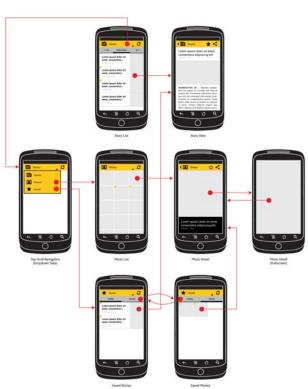

Refine wireframes, flow chart and annotation to ensure all steps have been considered and accounted for.

Are you accomplishing the goal?

Confirm:

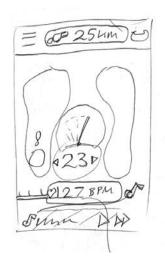

Organization
Direction
Interaction

https://developer.android.com/training/design-navigation/wireframing

Through all this — **Experience informs** visual design.

grahamtodman.co.uk/blog/

Creating a rough prototype can help quickly test the flow.

This could be extremely low fidelity or...

Include big targets for touch for less precision need

Professional Practice I

iOS Touch Targets

In the Human Interface Guidelines, Apple recommends a minimum target size of 44 pixels (px) wide 44 pixels tall.

This seems definitely a 'minimum size' and in practice this is still too small of an area to be trying to tap successfully.

It may be worth considering the physical limitation of an adult finger as a guide.

Android Touch Targets

In the Android Material Design Guidelines it's suggested that touch targets should be at least 48 x 48 dp*.

A touch target of this size results in a physical size of about 9mm, regardless of screen size. The recommended target size for touchscreen elements is 7–10mm.

It may be appropriate to use larger touch targets to accommodate a larger spectrum of users, such as children with developing motor skills.

https://medium.com/@zacdicko/size-matters-accessibility-and-touch-targets-56e942adc0ccessibility-and-targets-56e942adc0ccessibility-and-targets-56e942adc0ccessibility-and-targets-56e942adc0ccessibility-and-targets-56e942adc0ccessibility-and-targets-56e942adc0ccessibility-and-targets-56e942adc0ccessibility-and-targets-56e942adc0ccessibility-and-targets-56e942adc

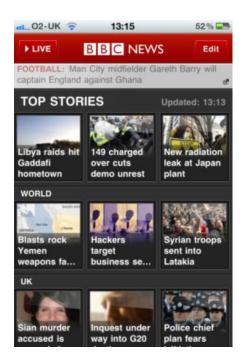

Spacing between navigation elements

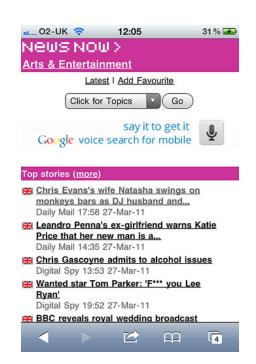

Professional Practice I

Fall

Spacing between navigation elements

Think "Mobile First" for websites

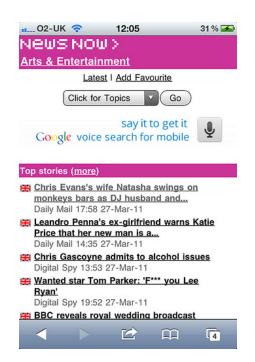

Professional Practice I

Fall

Spacing between navigation elements

Think "Mobile First" for websites

Professional Practice I

Graphical Elements

Clear, simpler and appealing information presentation Uses shades and hues of two or three main colors **Organized layout** Sufficient space between elements for touch display navigation Moderate use of GUI elements (scrolls, tables. icons, etc.)

Alignment

Consistent alignment and spacing contributes to more efficient information access and positive user experience.

Position GUI elements in relation to each other and in the space they reside.

Consistent

Grid

Balance

Alignment

Consistent alignment and spacing contributes to more efficient information access and positive user experience.

Position GUI elements in relation to each other and in the space they reside.

Consistent

Grid

Balance

Spacing

Spacing allows information to appear more organized.

White Space is generally defined as the space between printed text or graphics.

Spacing border – consecutively equal and enough spacing given to GUI elements.
